

LIST MANAGEMENT APP

In today's world, time management is a big issue that we all face. There are so many tasks to do and goals to achieve that we often forget our set of targets. To deal with this issue, we make multiple lists to remember different things and then fail to remember the location of those lists.

To solve this most prevalent problem, we have introduced this List Management App. This App has three sections:

- **Todo list:-**
Users can use the todo list section to save the tasks that they need to accomplish in future.
- **Shopping list :-**
Similarly shopping lists can be used for maintaining list of items which users need to buy.
- **Notes:-**
Notes section can be used to store important short notes.

The main aim of this app is to make all the lists available at one place and thus make the life of users fuss free.

System requirements:

Works on Android devices having Lollipop Android version(5.0).
